

Business Flow of Event Based on AMARYS

AMARYS is an up-to-date system that can handle various means of Internet-based acceptance, covering registration for participation, applications for tours, commodity sales, and abstract paper (file) submission. Participants are allowed to access the relevant screen using their own ID and password as many times as they want to make additional applications or alterations and to confirm the contents of their application. By accessing the relevant screen for administration, event organizers may check the updated status of applications and payments on a real-time basis.

AMARYS can be used for various event-related scenarios.

Users must comply with the relevant business laws applicable in Japan.

Conferences including international congresses

Academic conferences, medical conferences, symposiums

Corporate events

In-house meetings, events, employees trips, invitational events

Sports events

Events for group entry, events for individual entry, supporters tours

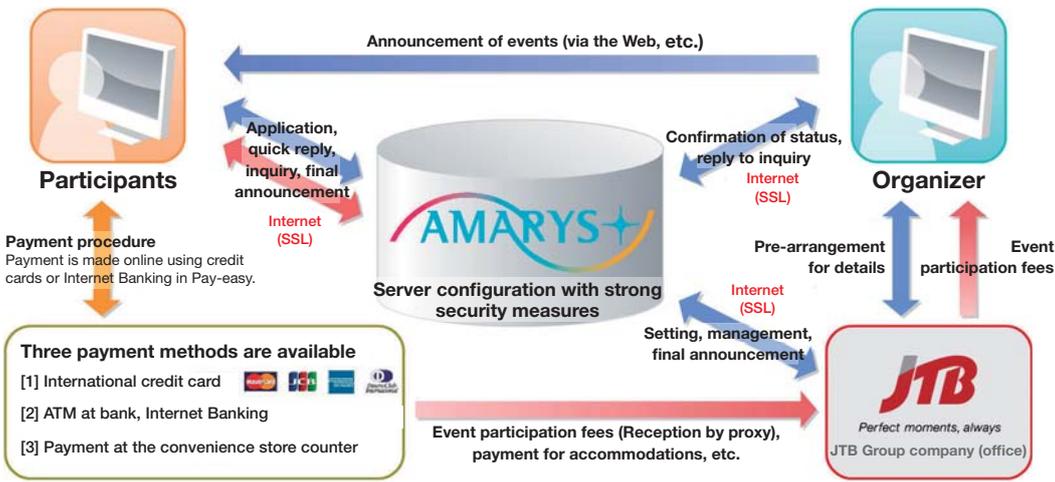

Acceptance of applications for tours

Acceptance of in-house applications, acceptance of general applications, acceptance of applications for community-based events

Other

Reception of questionnaire responses, site for accepting applications for campaigns, site for accepting applications for certification examinations

Image of AMARYS-based Operation

[2] and [3] are intended for residents in Japan only.

The screen design of AMARYS can be selected from among three patterns and seven colors for each pattern.

Example of changing coloration pattern

An original header can be used, screens can be operated as if they are of your own creation by featuring your company's logo mark in the header.

Choice of application types and log-in ID

AMARYS enables various types of registrations using one particular screen.

- [1] Application by individuals
 - [2] Application together with accompanying family members
 - [3] Application together by two or more accompanying persons
 - [4] Application by group
- The type of acceptance of applications can be designated for each event.

AMARYS uses three types of log-in IDs.

1. ID common to the system: A specific preferred ID can be assigned to individual participants. It is up to each participant's discretion to decide whether to keep and use that ID again for future events or abolish it after the event.
2. An employee ID number can be used as the log-in ID for AMARYS.
3. It is also possible to assign no ID (to make it impossible to log in again).

Benefits of Using AMARYS

Participants

Application can be made at any time and place.

Only if the Internet is available, application can be made both at the office and at home.

Reservations can be confirmed immediately.

As the system holds inventory, reservations can be confirmed immediately.

Alterations and cancellation can be made online.

The system is reassuring because alterations and cancellation of all kinds of arrangements can be made online.

A variety of payment methods are available.

The most convenient method for each participant can be selected.

Inquiries can be made at the screen.

Inquiries to the organizer and JTB can be made at the screen.

From individual application to application by group

Applications based on all types of units can be made, including by individuals, family, company, and team.

Organizers

It helps to improve business efficiency.

Time and effort for data collection and preparation of lists can be saved. Thus it helps the organizer improve their operational efficiency.

Real-time information can be obtained.

By accessing the screen for administration, update application status can be known at any time.

The system features a merchandising function.

In addition to registration for participation and acceptance of applications for accommodations, the system features a function for merchandise sales such as commemorative items.

The system features a function dedicated to invited guests.

In order to be courteous to VIP guests, a screen for exclusive access by VIP guests is prepared, where dedicated inventory can be held.

Well-developed communications tools

The system features well-developed tools for communications with participants, which helps reduce the communication workload and shorten the distance between the organizer and participants.

Reduction of risk related to personal information management

Important personal information can be well protected by JTB's solid server. Both risk and relevant workload can be reduced.

Up-to-date Functions of AMARYS

Besides those introduced below, the system is full of various convenient functions. For details, please contact at the JTB office.

Four different levels can be set for participation fees.

Participation fees can be classified according to attributes such as member, non-member, and student. Also, the four different levels of fees can be set for each attribute according to the time of application and time of payment.

Fees can be charged according to the attributes of participation.

Fees for social gatherings, excursions, etc., can be changed according to the attribute selected.
e.g. Social gathering: Member 5,000yen, Student 4,000yen

Restrictions can be applied based on the conditions of application for other items.

Applications for other items can be limited according to the conditions of application for other items, payment, etc., for example, not allowing those who have not submitted their paper to apply for participation, or not allowing those who have not paid the registration fee to apply for accommodations.

Photo of each participant's face can be collected.

With a filing function, the face photo of each participant can be collected. Also, it features a function for preparing a nameplate with a photo.

Request for placement on a waiting list can be accepted.

An upper limit can be set in the system for registration for participation in conferences, social gatherings, subcommittee meetings, etc., and requests for placement on a waiting list can be accepted when the capacity is filled.

All kinds of travel arrangements can be handled.

Applications for all types of travel arrangements can be accepted, including accommodations, transportation, etc., as well as package tours, optional tours, and excursions.

Confirmation sheet can be output.

A confirmation sheet will be automatically issued for all items that applications are made for, such as registration for participation and application for accommodations. The timing of automatic issuance can be determined by the organizer.

Handles sales of various kinds of goods

As the system can handle sales of all kinds of goods including box lunches, tickets, and commemorative items concurrently, it is very convenient. Inventories can be set for merchandise sales, and upper limit restrictions can be applied.

A function for accepting submitted papers, files, etc.

It features a function of accepting all sorts of submitted papers. Five types of papers can be submitted by one person based on two stages. Submission both in file and in HTML format can be accepted.

Screening function

The system can handle screening of accepted paper abstracts (files). Files are sent to those who review them, and their results are entered in the system. After final acceptance is determined, the submitters are notified of the results by the system.

Well-developed tools for communications with participants

It can implement simultaneous transmission of e-mail to all participants or those who meet certain conditions, and varied tools for communications with participants such as "Notice Display", "My Calendar", "Inquiry Function", are incorporated into it.

It features a function for handling questionnaires.

It features a function of sending out questionnaires to those who have completed registration for participation as many times as desired. It can easily handle a survey on attitudes toward the success of an event and effect measurement after the event.

Provides cellular phone format

Some of screens can accept applications made by cellular phone. Also, a function to check the result of an application using a cellular phone is incorporated in the system.

This is limited to use in Japan.

Payment is easy when using AMARYS. We provide various payment methods.

Payment by credit card

Payment using an acceptable credit card means online payment that reflects real-time information.

Our system supports all five major international credit card brands.

Introducing 3-D Secure, we have taken all-out security measures.

Payment at a convenience store

Payments made at major convenience stores will also be accepted.

The reference code for payment at a convenience store will be displayed on the relevant AMARYS screen. It should be printed out and presented at the convenience store for quick payment.

Pay-easy

Our system works with Pay-easy's system.

In addition to payment through the Internet Banking of financial institution nationwide, payment can also be made through ATMs at JP Bank and major city banks.

Whichever method is selected for payment, the relevant payment data will be registered into AMARYS within three hours maximum from the time of payment.

(Data in the case of payment by credit card will be reflected instantly.)

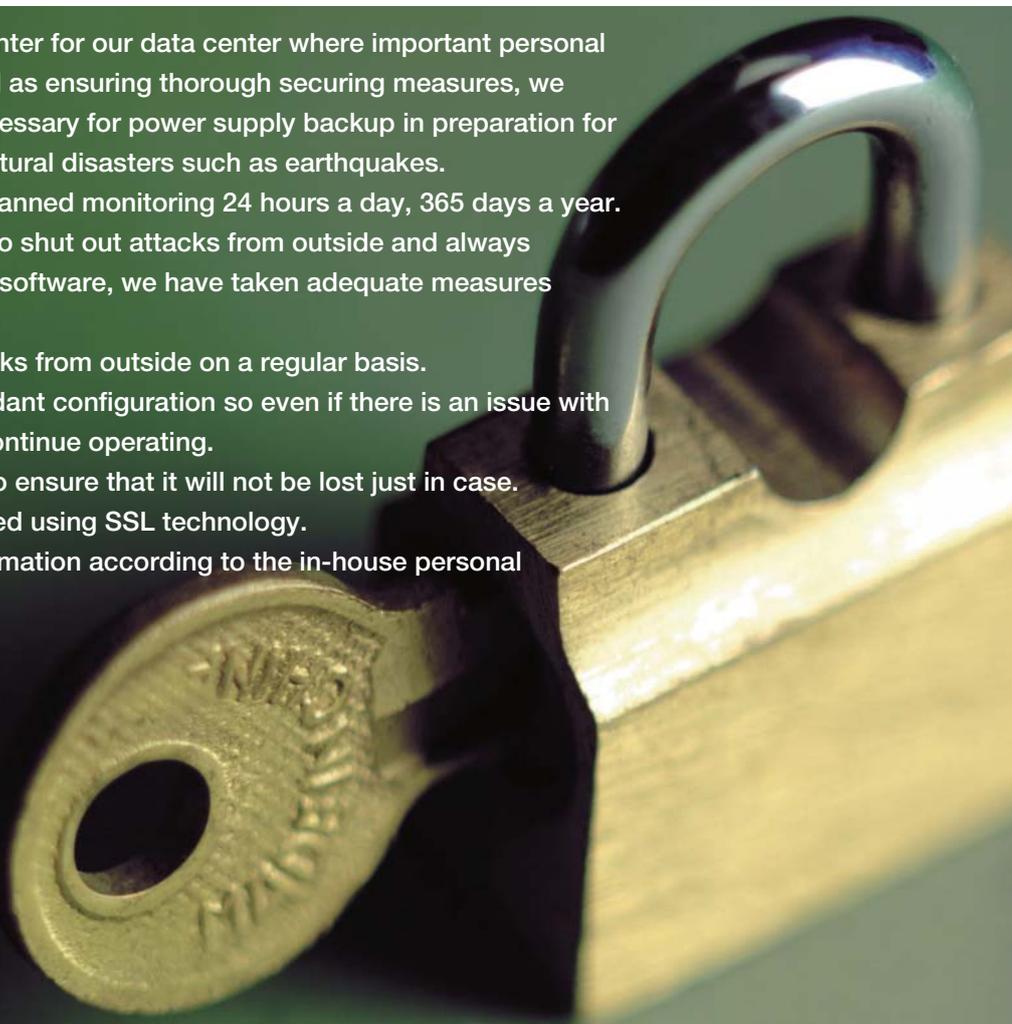

Payment at a convenience store counter and based on Pay-easy are available only for residents in Japan. Applicants are asked to pay a bank transfer fee of 420 yen.

Thorough Security Measures

- We use JTB's secure data center for our data center where important personal information is stored. As well as ensuring thorough securing measures, we have taken the measures necessary for power supply backup in preparation for all possible risks including natural disasters such as earthquakes.
- Persons in charge conduct manned monitoring 24 hours a day, 365 days a year.
- By setting a firewall and IPS to shut out attacks from outside and always installing up-to-date security software, we have taken adequate measures against viruses.

In addition, we examine attacks from outside on a regular basis.

- All the systems have a redundant configuration so even if there is an issue with one system, the others will continue operating.
- We will back up all our data to ensure that it will not be lost just in case.
- Communications are encrypted using SSL technology.
- We will protect personal information according to the in-house personal information policy.

We aim to develop AMARYS as a system that grows together with its users.
